

MESSAGING SERVICES FOR UNIQUELY IDENTIFIED MAIL**Abstract Of The Invention**

A method that enables the recipient to receive notification of the letters, flats and/or packages (mail) that the recipient is going to receive prior to the delivery of the mail. The recipient is then able to inform a post or courier i.e., Federal Express[®], Airborne[®], United Parcel Service[®], DHL[®], etc., of the manner in which the recipient would like the mail delivered. The post and courier hereinafter will be referred to as "carrier". The invention also allows the carrier to uniquely identify each piece or parcel of mail (even if they are from the same sender to the same recipient on the same day) so that the mail may be more easily identified by the carrier, sender and the recipient. For instance, the recipient may want the mail physically delivered to their house faster or slower, or the mail physically redirected to the recipient's temporary address, or physically delivered to the recipient's agent, or physically delivered to the recipient's attorney, or physically returned to the mailer, or have the carrier open the physical mail and have the carrier e-mail or fax the contents of the mailpiece to the recipient and/or parties designated by the recipient.
